

ETHICS STATEMENT

Manuscript: Institutional Observability Under Scaled AI Governance: Deployment-Scale Capacity Degradation in Human Oversight Pipelines

Journal: Technology in Society (Elsevier)

Date: June 3, 2026

Ethics Declaration

This research did not involve:

- Human subjects research
- Animal experiments
- Primary data collection from individuals
- Surveys, interviews, or ethnographic observation
- Clinical trials or medical research
- Vulnerable populations
- Deception or concealment

Institutional Review Board (IRB)

No institutional review board approval was required, as this study:

- Is a theoretical and simulation-based investigation
- Uses only publicly available data for model calibration
- Does not involve interaction with or observation of human participants
- Does not collect, store, or process personally identifiable information

Data Sources

All data used for model calibration were drawn from publicly available institutional reports and published literature:

- Vanderbilt University Center for Teaching (2023) — publicly available technical report
- Peterson Health Technology Institute (2026) — publicly available report
- Published peer-reviewed literature (cited in references)

No proprietary, confidential, or restricted-access data were used.

Research Integrity

- No data were fabricated, falsified, or manipulated.
- All simulation results are reproducible from documented parameters.
- All mathematical derivations are verifiable.
- All cited sources are accurately represented.

- The author has no undisclosed conflicts of interest.

Compliance with Elsevier Publishing Ethics

This research complies with:

- Elsevier's Publishing Ethics policies
- COPE (Committee on Publication Ethics) guidelines
- ICMJE (International Committee of Medical Journal Editors) recommendations (where applicable)
